EBP metrics summary and curation notes

Obtained EBP quality metric for Pri: 6.8.Q59

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

. Observed Haploid Number is different from Expected
. Observed Ploidy is different from Expected
. Observed sex is different from Sample sex

. BUSCO single copy value is less than 90% for Pri
. BUSCO duplicated value is more than 5% for Pri
. Assembly length loss > 3% for Pri
. More than 1000 gaps/Gbp for Pri

Curator notes

. Interventions/Gb: None
. Contamination notes: "FCS-GX identified 32 bacterial sequences that were removed from the assembly, the total amount of these contaminants added up 3,812,705 bp of sequence. "
. Other observations: "This assembly was obtained with Hifiasm from HiFi data. After scaffolding with Yahs the genome was still highly fragmented and duplicated but we could make several joins and edits during curation with PretextMap, resulting in a substantial increase on scaffold N50 from (~2 Mb to 228Mb) and reducing duplication. Curation made 25 cuts in contigs, 49 breaks at gaps and 63 joins. 178 haplotig sequences, adding up a total of 121 Mb of sequence, were removed during curaton. Before curation, purge_dups had removed 7341 sequences, adding up a total of 1.5 Gb of sequence and reducing busco dups from 81% to 21% while keeping completeness at 97%."
