EBP metrics summary and curation notes

Obtained EBP quality metric for hap1: 7.7.Q70

Obtained EBP quality metric for hap2: 7.7.Q70

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

Curator notes

. Interventions/Gb: 7
. Contamination notes: "No contamination was detected by Blobtoolkit which was run on the diploid assembly"
. Other observations: "This assembly was obtained with Hifiasm from ONT data. Given the high quality of both haplotypes, curation was done in diploid mode. We have shared the curated and painted pretext map corresponding to the diploid assembly (after curating each hap separately and combining them). The sex SUPER was initially mistakenly labelled as X, but this is corrected in the round corresponding to diploid curation. The Z was confirmed by alignment to other evolutionarily close species."

K-mer spectra of curated assembly

Distribution of k-mer counts per copy numbers found in **hap1** (hap1.)

Distribution of k-mer counts per copy numbers found in **hap2** (hap1.)

Distribution of k-mer counts per copy numbers found in **asm** (dipl.)

Distribution of k-mer counts coloured by their presence in reads/assemblies

Post-curation contamination screening

hap1. Bubble plot circles are scaled by sequence length, positioned by coverage and GC proportion, and coloured by taxonomy. Histograms show total assembly length distribution on each axis.
