EBP metrics summary and curation notes

Obtained EBP quality metric for collapsed: 6.7.Q62

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

- . Observed Haploid size (bp) has >20% difference with Expected
- . BUSCO single copy value is less than 90% for collapsed
- . BUSCO duplicated value is more than 5% for collapsed
- . Assembly length loss > 3% for collapsed

Curator notes

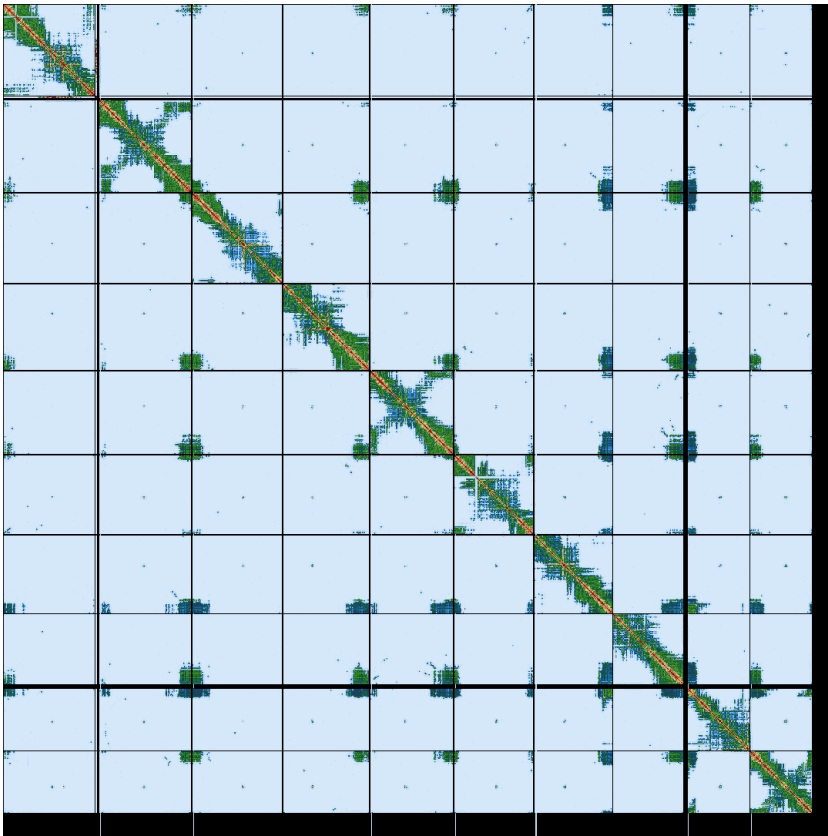

- . Interventions/Gb: 310
- . Contamination notes: ""
- . Other observations: "The assembly of VIOLA ULIGINOSA (ddVioUlig1) is based on 57X PacBio data and 347X Arima Hi-C data generated as part of the European Reference Genome Atlas (ERGA, <https://www.erga-biodiversity.eu/>) via the Biodiversity Genomics Europe project (BGE, <https://biodiversitygenomics.eu/>). The assembly process included the following steps: initial PacBio assembly generation with Hifiasm, removal of contaminant sequences using Context, and Hi-C-based scaffolding with YaHS. In total, 20 contigs were identified as contaminants (bacterial), totaling 274,144 pb (with the largest being 31,948 pb). We did not use purge_dups to remove haplotype duplications, as it did not work properly on this genome. The mitochondrial genome was assembled using OATK. Finally, the primary assembly was analyzed and manually improved using Pretext. During manual curation, 21 haplotypic region was removed, totaling 20,299,065 pb (with the largest being 6,007,832 pb) and 38 contaminants was removed. Chromosome-scale scaffolds confirmed by Hi-C data were named in order of size. "
