EBP metrics summary and curation notes

Obtained EBP quality metric for collapsed: 6.6.Q50

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

- . Observed Haploid size (bp) has >20% difference with Expected
- . Observed Haploid Number is different from Expected
- . Kmer completeness value is less than 90 for collapsed
- . BUSCO single copy value is less than 90% for collapsed
- . Not 90% of assembly in chromosomes for collapsed

Curator notes

- . Interventions/Gb: None
- . Contamination notes: "FCS-GX and Blobtoolkit identified 90 contigs as contaminants and they were removed from the assembly."
- . Other observations: "Sequencing was done at UNIBA for two different specimens: qqCypTeyr2 (HiFi) and qqCypTeyr8 (Hi-C). Assembly was performed by the CNAG. We obtained a contig level assembly as detailed. We first assembled the HiFi reads with Hifiasm and then ran purge_dups on it to collapse duplicated haplotigs and repeats. The Hi-C barely mapped to the purged assembly so scaffolding did not work. We did not assemble the mitogenome. We did not find evidences of contamination in the Hi-C or HiFi reads, and our QC of the HiC library shows <1% mapped reads and the few Cis Read Pairs mapping at distances shorter than 1kb"
