## EBP metrics summary and curation notes

Obtained EBP quality metric for pri: 7.8.Q66

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

- . Observed sex is different from Sample sex
- . Kmer completeness value is less than 90 for pri
- . Assembly length loss > 3% for pri

### Curator notes

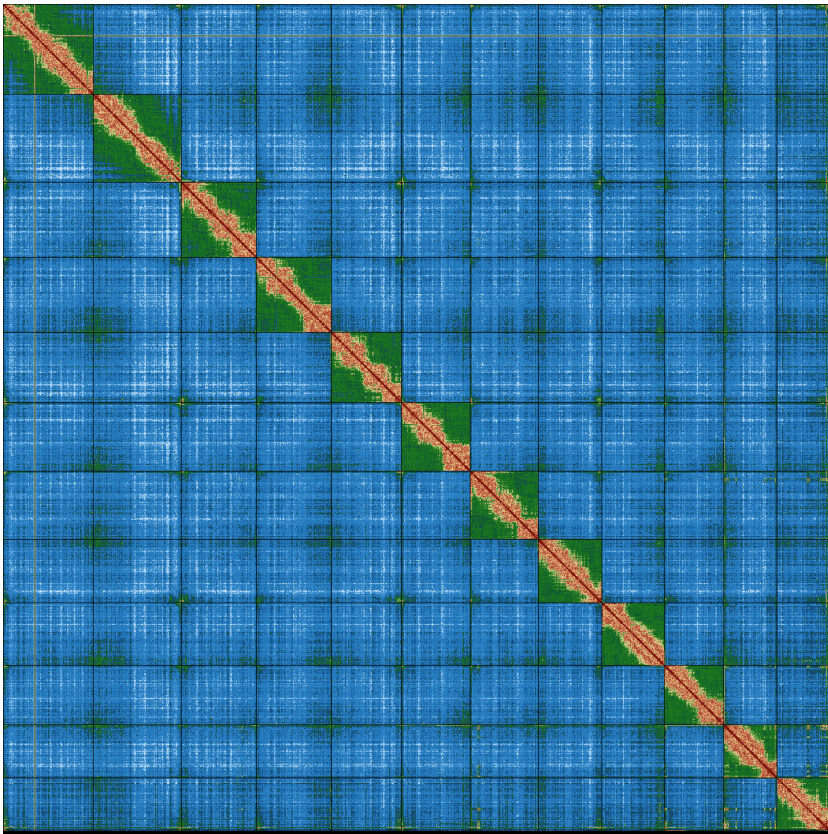

- . Interventions/Gb: None
- . Contamination notes: "No presence of contaminants."
- . Other observations: "One round of curtation done. Hard to determine the sex or identify sex chromosomes. Earlier papers (from the 1950's) suggest a 22A+X1X2 configuration, but species in this group could have from 1 to 10 X chromosomes. Most Lycosidae have a X1X2/X1X1X2X2 configuration. Identifying the sex chromosomes for this Genus requires lab work, and can't be done at this stage."
