EBP metrics summary and curation notes

Obtained EBP quality metric for collapsed: 6.7.Q65

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

- . Observed Haploid Number is different from Expected
- . Kmer completeness value is less than 90 for collapsed

Curator notes

. Interventions/Gb: 215
. Contamination notes: ""
. Other observations: "The assembly of HOLOTHURIA POLI (ehHolPoli1) is based on 48X PacBio data and 662X Arima Hi-C data generated as part of the European Reference Genome Atlas (ERGA, <https://www.erga-biodiversity.eu/>) via the Biodiversity Genomics Europe project (BGE, <https://biodiversitygenomics.eu/>). The assembly process included the following steps: initial PacBio and Hi-C assembly generation with Hifiasm creating a dual assembly, removal of contaminant sequences using Context, and Hi-C-based scaffolding with YaHS. Both haplotypes were curated, but only haplotype 1 (HAP1) was retained for this EAR report. In total, 7 contigs were identified as contaminants (bacterial), totaling 332,045 pb (with the largest being 181,308 pb). The mitochondrial genome was assembled using OATK. Finally, the primary assembly was analyzed and manually improved using Pretext. During manual curation, 81 haplotypic region was removed, totaling 358,723,970 pb (with the largest being 56,148,590 pb) and 14 were identified as contaminants. "
